

ENVIRONMENTAL POLICY

Environment remains a major concern for present generations in order to make our system sustainable for future generations.

Company Dubosson Raymond is attached to the respect of the environment and wishes to continue its implication and its customer responsiveness beyond its current quality engagements. Therefore, the company decided to assume its environmental responsibility by implementing a continuous improvement policy according to ISO 14001.

By implementing an environmental management policy, the company commits to respecting official rules in order to achieve following goals:

1. Follow up of ISO 14001 certification
2. Improve waste management and consumption of natural resources
3. Decrease our waste and prevent air or soil pollution
4. Make our employees aware of the importance of environmental protection and train them to use first-aid tools in case of emergency
5. Remain alert about internal and external plant cleanliness
6. Check regularly and improve continuously performances especially significant aspects of our environmental analysis.

In order to achieve this mission, I appointed a responsible manager who will guarantee the respect of this policy. I personally commit to following up the implementation of all above mentioned goals.

**My desire is to meet your expectations,
Sophie REVILLOD
